“You may look around and see two groups: white collar and blue collar. But I don’t see it that way and you know why not? Because I’m collar-blind.”

Michael Scott

Accounting is the means by which the business owner tracks the financial progress of his business. Computerized Accounting will allow the student to demonstrate accounting procedures in a variety of business structures both manually and electronically. This course provides students with the opportunities to focus on multi-cultural issues, ethical dilemmas, global topics, communications activities, accounting careers, math applications, and spreadsheet topics as well as the traditional accounting procedures.

“Employment of accountants and auditors is projected to grow 10 percent from 2016 to 2026, faster than the average for all occupations. In general, employment growth of accountants and auditors is expected to be closely tied to the health of the overall economy. As the economy grows, more workers should be needed to prepare and examine financial records.”

U.S. Bureau of Labor Statistics
