Science Careers

An environmental scientist could...

Help avoid famines by projecting how climate change will affect worldwide farming and food distribution.

Find an underground water reserve that can be used to produce geothermal energy.

Gather and evaluate meteorological data to predict a drought.

Help refineries reduce their toxic gas emissions, which contribute to acid rain and global warming.

What you will do:

- ❖ Fun hands-on labs
- ❖ Discuss current environmental topics/issues
- ❖ Exciting fieldtrips
- ❖ Learn content you can use in your everyday life
- ❖ Learn about the abundant careers in the green movement
- ❖ Spend time outside exploring the world around you
- ❖ Discover how you can make a difference!
